6-2 R Homework

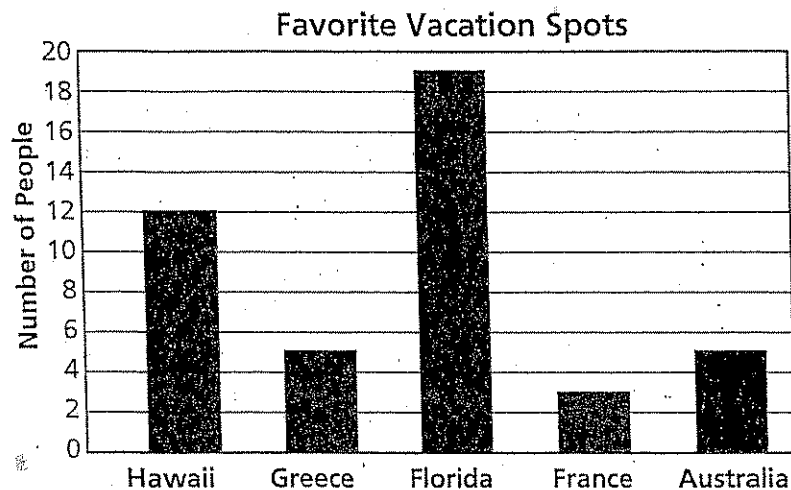

# Bar Graphs

You can use single bar graphs or double bar graphs to show data.

A single bar graph presents 1 set of data. A double bar graph presents 2 sets of data.

When you create a double bar graph, you need to make a key to represent each set of data. Write a title and headings for the vertical and horizontal sides. Select a scale just as you would for a single bar graph. Remember to include different headings for both sets of data.

Use the graphs to answer the questions.

1. What is the favorite vacation spot? How many people chose it?

2. Did more people choose France, Hawaii or Greece as their favorite vacation spot?
